

# SousChef 1.2 (v558) Release Notes

## **Headline features:**

- Metric support
- Imports large MacGourmet databases
- Paging added to search results
- Grocery lists have a bunch of improvement
- Ingredient parsing is vastly more accurate

## **Details:**

### ***Metric support***

- Feature: Convert a particular recipe to metric. Recipe -> Convert to Metric units
- Feature: Option in Preferences -> Units to convert recipes to either metric or US imperial when either importing or downloading from the cloud.

### ***MacGourmet import***

- Improvements: Progress bar added for MacGourmet import.
- Bug: Can now properly import large MacGourmet databases. SousChef is responsive throughout.

### ***Grocery Lists***

- Feature: Menu item to add a recipe to a particular grocery list. Find it under Recipe -> Add to Grocery List -> [pick one]
- Feature: Context menus to add an ingredient or recipe to a particular grocery list. Right-click on a recipe or an ingredient -> Add to Grocery List -> [pick one]
- Improvement: Grocery list items can be rearranged via drag-and-drop. Items can be duplicated via option-drag.
- Improvement: Press 'return' while creating grocery lists to add another item
- Bug: Can now successfully create grocery lists by dragging recipes from either the main library or the cloud to Grocery List.
- Bug: Grocery list amounts are no longer converted to scientific notation if greater than 100.
- Bug: 'Share Online' at the bottom right will no longer appear in Grocery Lists
- Bug: Tooltips on Email and Print in grocery lists are fixed
- Bug: Can now Select All recipes, grocery lists, items in a grocery list.
- Bug: File -> Print and command-P now print grocery lists. Fancy that.
- Bug: Check marks now actually affect printed/emailed grocery lists.

### ***Recipe import and editing***

- Improvement: SousChef now saves more often.
- Improvement: SousChef is much much better at determining what is and isn't an ingredient
- Bug: Units should no longer be mistaken for ingredients.
- Bug: UTF-8 import should work now. This is for characters such as accents.
- Bug: Can now edit ingredients/directions/notes even if they weren't added upon import.

### ***Cloud***

- Feature: Search results now have pages.
- Improvement: Uploading recipes to the cloud is quicker.

- Bug: "name is a required value." error is handled better. This was caused by malformed recipes in the cloud. Should save properly, too.
- Bug: Can no longer enter edit mode for cloud recipes.

### ***Everything Else***

- Feature: Can now reset all warnings in Preferences -> General.
- Feature: Code signing added. Used when blogging with MarsEdit.
- Bug: Quit times should be faster due to better handling of spotlight metadata.
- Bug: Multiple recipe delete dialog now Cancels correctly.
- Bug: Cleaned up list of substitutions.
- Bug: Speed improvements, crash fixes, and other minor bugfixes.
